

Dual-Rail Ultra-Low Dropout 1A LDO

General Description

The ET5A2ADJZB is CMOS-based low-dropout, low-power linear regulators, offering 1000mA with NMOS pass transistor and a separate bias supply voltage (V_{BIAS}). The device provides very stable, accurate output voltage with low noise, high ripple rejection and low supply current suitable for space constrained, noise sensitive application.

ET5A2ADJZB consists of an accurate voltage-reference block, an error amplifier, a thermal shutdown circuit, and a current limit circuit.

Features

- Wide V_{IN} input voltage range from V_{OUT} to 5.5V
- Wide V_{BIAS} voltage range from 3.0V to 5.5V
- Output voltage range from 0.5V to 3.0V adjustable
- Very low V_{BIAS} input current of typical 35 μ A
- Ultra low dropout is typical 40mV at 1000mA load
- Built-in over-current protection and thermal shutdown circuit
- Built-in auto-discharging circuit
- Built-in under voltage lock-out
- Operation temperature range is -40 to 125°C
- Package information:

Part No.	Package	MSL
ET5A2ADJZB	WLCSP6 (1.14mm×0.74mm,0.4 pitch)	Level 1

Applications

- Constant-voltage power supply for battery-powered device
- Constant-voltage power supply for smartphones, tablets
- Constant-voltage power supply for cameras, DVRs, STB and camcorders

ET5A2ADJZB

Pin Configuration

Pin Function

Pin Name	Symbol	Pin Description
A1	OUT	The power output of the device. A 22 μ F (typ.) ceramic capacitor is recommended at this pin.
A2	IN	Input voltage Pin. Large bulk capacitance should be placed closely to this pin. A 1 μ F (typ.) ceramic capacitor is recommended at this pin.
B1	ADJ	Adjustable Regulator Feedback Input. Connect to output voltage resistor divider central node.
B2	EN	Enable Input.
C1	GND	Ground pin.
C2	BIAS	Input voltage for controlling circuit.

ET5A2ADJZB

Block Diagram

Functional Description

The ET5A2ADJZB dual-rail very low dropout voltage regulator is using NMOS pass transistor for output voltage regulation from V_{IN} voltage. All the low current internal control circuitry is powered from the V_{BIAS} voltage.

The use of an NMOS pass transistor offers several advantages in applications. Unlike PMOS topology devices, the output capacitor has reduced impact on loop stability. V_{IN} to V_{OUT} operating voltage difference can be very low compared with standard PMOS regulators in very low V_{IN} applications.

The ET5A2ADJZB offers smooth start-up.

Input and output Capacitor

The device is designed to be stable for ceramic output capacitors with 22 μ F capacitance. The device is also stable with multiple capacitors in parallel. In applications where no low input supplies impedance available (PCB inductance in V_{IN} and/or V_{BIAS} inputs as example), the recommended C_{IN} = 10 μ F and C_{BIAS} = 1 μ F or greater.

Enable Pin Operation

The ET5A2ADJZB is turned on by setting the EN pin to "H". The threshold limits are covered in the electrical

ET5A2ADJZB

characteristics table in this datasheet. When the EN pin is not used, connect the EN pin with V_{BIAS} to keep the LDO in operating mode.

Current Limit Protection

When output current of V_{OUT} pin is higher than current limit threshold or the V_{OUT} pin is direct short to GND, the current limit protection will be triggered and clamp the output current at a predesigned level to prevent over-current and thermal damage.

Thermal Shutdown Protection

Thermal protection disables the output when the junction temperature rises to approximately $+160^{\circ}\text{C}$, allowing the device to cool down. When the junction temperature reduces to approximately $+140^{\circ}\text{C}$ the output circuit is enabled again. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the heat dissipation of the regulator, protecting it from damage due to overheating.

Auto Discharging

When the EN pin set to “L”, the output circuit will be disable immediately, and the Auto-Discharging circuit will be turned on to discharge the electric charge on output capacitor, and decrease the voltage of V_{OUT} in very short time.

Output Voltage Adjust

The required output voltage of Adjustable devices can be adjusted from V_{REF} to 3.0 V using two external resistors. Typical application schematics is shown blow.

$$V_{OUT} = V_{REF} \times (1 + R1/R2)$$

Typical value of V_{REF} (ADJ Pin) is 0.5V. It is recommended to keep the total serial resistance of resistors ($R1 + R2$) no greater than 100k Ω .

The output voltage needs to take into account the error caused by the resistance accuracy.

Absolute Maximum Ratings

Item	Rating	Unit
Input Voltage(IN Pin)	-0.3 to 6.0	V
Input Voltage (BIAS Pin)	-0.3 to 6.0	V
Input Voltage (EN Pin)	-0.3 to 6.0	V
Input Voltage (FB Pin)	-0.3 to 6.0	V
Output Voltage(OUT Pin)	-0.3 to 6.0	V
Maximum Load Current	1000	mA
Maximum Power Consumption	1150	mW
Storage Temperature Range	-65 to 150	°C
Lead Temperature (Soldering, 10 sec)	260	°C
Operating Junction Temperature	-40 to +150	°C
Thermal Resistance, Junction-to-Air	87	°C/W

Recommended Operating Conditions

Symbol	Item	Rating	Unit
V _{IN}	IN Input Voltage	V _{OUT} + V _{DROP} to 5.5	V
V _{BIAS}	BIAS Input Voltage	3 to 5.5 & V _{BIAS} >V _{OUT} +1.6V	V
I _{OUT}	Output Current	0 to 1000	mA
T _A	Operating Ambient Temperature	-40 to 125	°C
C _{IN}	Effective Input Ceramic Capacitor Value	4.7 to 22	μF
C _{BIAS}	Effective Input Ceramic Capacitor Value	0.22 to 4.7	μF
C _{OUT}	Effective Output Ceramic Capacitor Value	10 to 33	μF
ESR	Input and Output Capacitor Equivalent Series Resistance	5 to 100	mΩ

Notes:

1: The maximum input voltage should take into account the maximum power consumption ($P_D(max)$). The calculation formula is as follows:

$$P_D(max) = (V_{IN(max)} - V_{OUT}) \times I_{OUT}$$

The maximum power consumption of the circuit is 1150mW.

$$V_{IN(max)} = 1150mW / I_{OUT} + V_{OUT}$$

For example:

If $V_{OUT}= 1.05V$, $I_{OUT} = 1000mA$, The maximum input voltage is $V_{IN(max)} = 1150mW / 1000mA + 1.05 = 2.2V$

2: V_{DROP} FT test method: test the V_{OUT} voltage at $V_{SET}+V_{DROPMAX}$ with output current.

3: Guaranteed by design and characterization. not a FT item.
