

High-Speed USB 2.0 480Mbps Switch

General Description

The ET7228 is a 2CH single-pole/double-throw (SPDT) switches. Their wide bandwidth and low bit-to-bit skew allow them to pass high-speed differential signals with good signal integrity.

Each switch is bidirectional and offers little or no attenuation of the high-speed signals at the outputs. Industry-leading advantages include a propagation delay of less than 250 ps, resulting from its low channel resistance and low I/O capacitance. Their high channel-to-channel crosstalk rejection results in minimal noise interference. Their bandwidth is wide enough to pass High-Speed USB 2.0 differential signals (480 Mb/s).

ET7228 is offered in a QFN10L package.

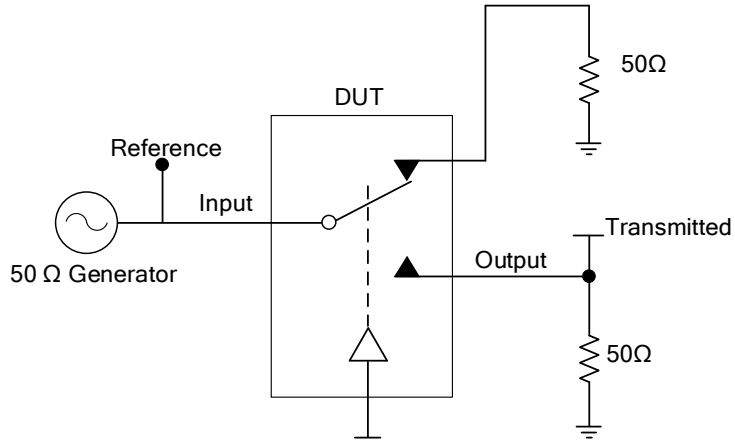

Figure 8. Off Channel Isolation/On Channel Loss(BW)/Crosstalk

(On Channel to Off Channel)/ V_{ONL}

Channel switch control/s test socket is normalized. Off isolation is measured across an off channel. On loss is the bandwidth of an On switch. V_{ISO} , Bandwidth and V_{ONL} are independent of the input signal direction.

V_{ISO} = Off Channel Isolation = $20 \lg (V_{OUT} / V_{IN})$ for V_{IN} at 100 kHz.

V_{ONL} = On Channel Loss = $20 \lg (V_{OUT} / V_{IN})$ for V_{IN} at 100 kHz to 50 MHz.

Bandwidth (BW) = the frequency 3 dB below V_{ONL} .

V_{CT} = Use V_{ISO} setup and test to all other switch analog input/outputs terminated with 50 Ω.
