

ET536XX - High PSRR Low Noise 300mA LDO

General Description

The ET536XX family are the 300mA LDO with auto discharge function. It uses an advanced CMOS process and a PMOSFET pass device to achieve high power supply rejection ratio (PSRR), low noise, low dropout, low ground current, fast start-up and excellent output accuracy.

The ET536XX family are stable with a 1.0 μ F ceramic output capacitor, uses a precision voltage reference and feedback loop to achieve excellent Regulation and transient response.

The ET536XX family offered in a small SOT23-5 and DFN4 package, which are ideal for small form factor portable equipment.

Features

- Wide Input Voltage Range from 1.9V to 5.5V
- Up to 300mA Load Current
- Standard Fixed Output Voltage :1.05V, 1.1V, 1.2V, 1.5V, 1.8V, 2.4V, 2.5V, 2.8V, 3.0V and 3.3V etc.
- Very Low I_Q is 45 μ A typical
- Low Dropout is typical 145mV@2.8V at 300mA Load
- Very High PSRR: 75dB at 1KHz
- Very Low Noise is 20 μ Vrms at 1.2V output
- Excellent Load/Line Transient Response
- Offered DFN4 (1 $\times$ 1) or SOT23-5 packages

Applications

- Smart Phones and Cellular Phones
- Digital Still Cameras
- Portable instrument

ET 536 XX X X

<u>XX</u> Output Voltage		<u>X</u> Package		<u>B</u> Auto-Discharging Function	
XX	Output Voltage For example, 18 is 1.8V output	Y	DFN4(1×1)	B	Auto-discharging available
		Blank	SOT23-5		

Part No.	Package	Packing Option	MSL
ET536XXYB	DFN4 (1×1)	Tape and Reel, 10K/Reel	1
ET536XXB	SOT23-5	Tape and Reel, 3K/Reel	3

Pin Configuration

Pin Function

Pin No.		Pin Name	Pin Function
DFN4	SOT23-5		
1	5	OUT	Output pin. A 1μF low-ESR capacitor should be connected to this pin to ground.
2	2	GND	Ground
3	3	EN	Enable control input, active high. Do not leave EN floating
4	1	IN	Supply input pin. Must be closely decoupled to GND with a 1μF or greater ceramic capacitor
TP		Thermal Pad	Thermal pad for DFN4(1×1) package, connect to GND or leave floating. Do not connect to any potential other than GND.
	4	NC	No connection.

ET536XX

Block Diagram

Functional Description

Input Capacitor

A $1\mu\text{F}$ ceramic capacitor is recommended to connect between VIN and GND pins to decouple input power supply glitch and noise. The amount of the capacitance may be increased without limit. This input capacitor must be located as close as possible to the device to assure input stability and less noise. For PCB layout, a wide copper trace is required for both VIN and GND.

Output Capacitor

An output capacitor is required for the stability of the LDO. The recommended output capacitance is from $0.47\mu\text{F}$ to $4.7\mu\text{F}$, Equivalent Series Resistance (ESR) is from $5\text{m}\Omega$ to $100\text{m}\Omega$, and temperature characteristics is X7R or X5R. Higher capacitance values help to improve load/line transient response. The output capacitance may be increased to keep low undershoot/overshoot. Place output capacitor as close as possible to OUT and GND pins.

ON/OFF Input Operation

The ET536XX is turned on by setting the EN pin high, and is turned off by pulling it low. If this feature is not used, the EN pin should be tied to IN pin to keep the regulator output on at all time.

Ultra Fast Start-up

After enabled, the ET536XX is able to provide full power in as little as tens of microseconds, typically $80\mu\text{s}$.

ET536XX

This feature will help load circuitry move in and out of standby mode in real time, eventually extend battery life for mobile phones and other portable devices.

Current Limit Protection

When output current at the OUT pin is higher than current limit threshold or the OUT pin, the current limit protection will be triggered and clamp the output current to approximately 500mA to prevent over-current and to protect the regulator from damage due to overheating.

Thermal shutdown Protection

Thermal protection disables the output when the junction temperature rises to approximately +155°C, allowing the device to cool down. When the junction temperature reduces to approximately +130°C the output circuitry is enabled again. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the heat dissipation of the regulator, protecting it from damage due to overheating.

Absolute Maximum Ratings

Symbol	Parameters (Items)		Value	Unit
V _{IN}	IN Voltage		-0.3 to 6.5	V
V _{EN}	Input Voltage (EN Pin)		-0.3 to V _{IN} +0.3	V
V _{OUT}	Output Voltage		-0.3 to V _{IN} +0.3	V
I _{MAX}	Maximum Load Current		500	mA
P _D	Maximum Power Consumption	DFN4	400	mW
		SOT23-5	400	
V _{ESD}	Human Body Model (JEDEC JS-001)		±4000	V
	Charged Device Model (JESD22-C101)		±1500	
R _{θJA}	Junction-to-ambient thermal resistance		250	°C/W
T _J	Operating Junction Temperature		-40 to 150	°C
T _{STG}	Storage Temperature		-65 to 150	°C
T _{SLOD}	Lead Temperature (Soldering, 10 sec)		300	°C

Recommended Operating Conditions

Symbol	Parameters	Rating	Unit
V _{IN}	Input Voltage	1.9 to 5.5	V
I _{OUT}	Output Current	0 to 300	mA
T _A	Operating Ambient Temperature	-40 to 85	°C
C _{IN}	Effective Input Ceramic Capacitor Value	0.47 to 4.7	μF
C _{OUT}	Effective Output Ceramic Capacitor Value	0.47 to 4.7	μF
ESR	Input and Output Capacitor Equivalent Series Resistance (ESR)	5 to 100	mΩ
