

8-Bit Shift Registers with Output Latches

General Description

The 74HC595 is a high speed shift register utilizes advanced silicon-gate CMOS technology. This device possesses the high noise immunity and low power consumption of standard CMOS integrated circuits.

This device contains an 8-bit serial-in, parallel-out shift register that feeds an 8-bit D-type storage register. The storage register has 8 3-STATE outputs. Separate clocks are provided for both the shift register and the storage register. The shift register has a direct-overriding clear, serial input, and serial output (standard) pins for cascading. Both the shift register and storage register use positive-edge triggered clocks.

If both clocks are connected together, the shift register state will always be one clock pulse ahead of the storage register.

Features

- Low quiescent current: 80 μ A maximum
- Low input current: 1 μ A maximum
- 8-bit serial-in, parallel-out shift register with storage
- Wide operating voltage range: 2.0V to 6.0V
- Shift register has direct clear
- Guaranteed shift frequency: DC to 30 MHz

Device information

Part Name	Package	Packing Option
74HC595M	SOP16	Tape and Reel ,4K/Reel
74HC595V	TSSOP16	Tape and Reel ,4K/Reel

Applications

- LED panel display
- LED display screen

74HC595

Pin Configuration

Pin Function

Pin No.	Name	I/O	Description
15, 1~7	QA~QH	O	8 bit 3-STATE Output
8, 16	GND, VCC	—	Ground, Power Supply
9	Q'H	O	Serial Output
10	SCLR	I	Shift Register cleared
11	SCK	I	Shift Register clocked
12	RCK	I	Output Register clocked
13	$\overline{G}$	I	Output state control
14	SER	I	Data input

Truth Table

RCK	SCK	SCLR	$\overline{G}$	Description
X	X	X	H	QA to QH = 3-STATE
X	X	L	L	Shift Register cleared, Q'H =0
X	↑	H	L	Shift Register clocked, Q _N = Q _{N-1} , Q ₀ = SER
↑	X	H	L	Contents of Shift Register transferred to output latches
